TECHNICAL DESCRIPTION

The ND9000 is a 4–20 mA or fieldbus powered microcontroller-based intelligent valve controller. The device contains a Local User Interface (LUI) enabling local configuration. A PC with FieldCare software can be connected to the ND9000 itself or to the control loop.

The powerful 32-bit microcontroller controls the valve position. The measurements include:

- Input signal
- Valve position with contactless sensor
- Actuator pressures, 2 independent measurements
- Supply pressure
- Spool valve position
- Device temperature

Advanced self-diagnostics guarantees that all measurements operate correctly. After connections of electric signal and pneumatic supply, the micro controller (μC) reads the input signal, position sensor (α), pressure sensors (Ps, P1, P2) and spool position sensor (SPS). A difference between input signal and position sensor (α) measurement is detected by control algorithm inside the μC. The μC calculates a new value for prestage (PR) coil current based on the information from the input signal and from the sensors. The changed current to the PR changes the pilot pressure to the spool valve. Reduced pilot pressure moves the spool and the actuator pressures change accordingly. The spool opens the flow to the driving side of the double diaphragm actuator and opens the flow out from the other side of the actuator. The increasing pressure will move the diaphragm piston. The actuator and feedback shaft rotate. The position sensor (α) measures the rotation for the μC. The μC using control algorithm modulates the PR-current from the steady state value until the new position of the actuator, according to the input signal, is reached.

### DRIVER SETS

Driver sets including the needed parts when assembling ND9000 on rotary actuators with VDI/VDE 3845 attachment face, Nelles E-series actuators or Nelles standard mounting faces. Select the correct driver set according to the actuator and the pneumatic connections of valve controller or gauge block when applicable. Note! Earlier the DS04 was delivered with bareshaft positions as default. This practice is no longer valid, the needed driver set must be ordered as an accessory.

| DS01 | Driver set for ND7100 / ND9100 / ND9400 on actuators with VDI/VDE 3845 attachment face. Set includes the G1/4 plug for single acting actuators. The driver set should also be applied with all ND97/99 with gauge blocks A1, A2 or A6. |
| DS02 | Driver set for ND72/92/93 on actuators with VDI/VDE 3845 attachment face. Set includes the 1/4"NPT plug for single acting actuators. The driver set should also be applied with all ND with gauge blocks A3, A5, A7 or A10. |
| DS04 | General driver set for ND71/72/91/92/93/94 on actuors with VDI/VDE 3845, Neles E-series actuators and Neles standard attachment face (e.g. when replacing NE/NP7 or ND800 with S2 shaft). Earlier default driver set. Includes: 1/4"NPT, 1/4"NPT and G1/4"NPT when used with single acting actuators or flush mounted on E-series actuators. |

### 3RD PARTY MOUNTING SETS

Mounting sets between the ND9000 generation valve controllers and linear actuators, including bracket and ball joint based feedback system. Note! Sets are including the 1/4" pneumatic plugs needed when used with single acting actuators.

| MS01 | Mounting set for linear actuators, attachment face according to IEC 65034-6, stroke length 10-55 mm. (H116240) |
| MS02 | Mounting set for linear actuators, attachment face according to IEC 65034-6, stroke length 51-120 mm. (H120404) |
| MS03 | Mounting set for Maseonell 87/88 actuators, sizes 6...23. Stroke length 12-64 mm. (H120809) |
